01 LASERCUT PANEL- CURTAIN

This curtain is made of individual leather elements that have been made using a laser cut process.

This creates a large leather surface that is characterised by a filigree and semi-transparent pattern.

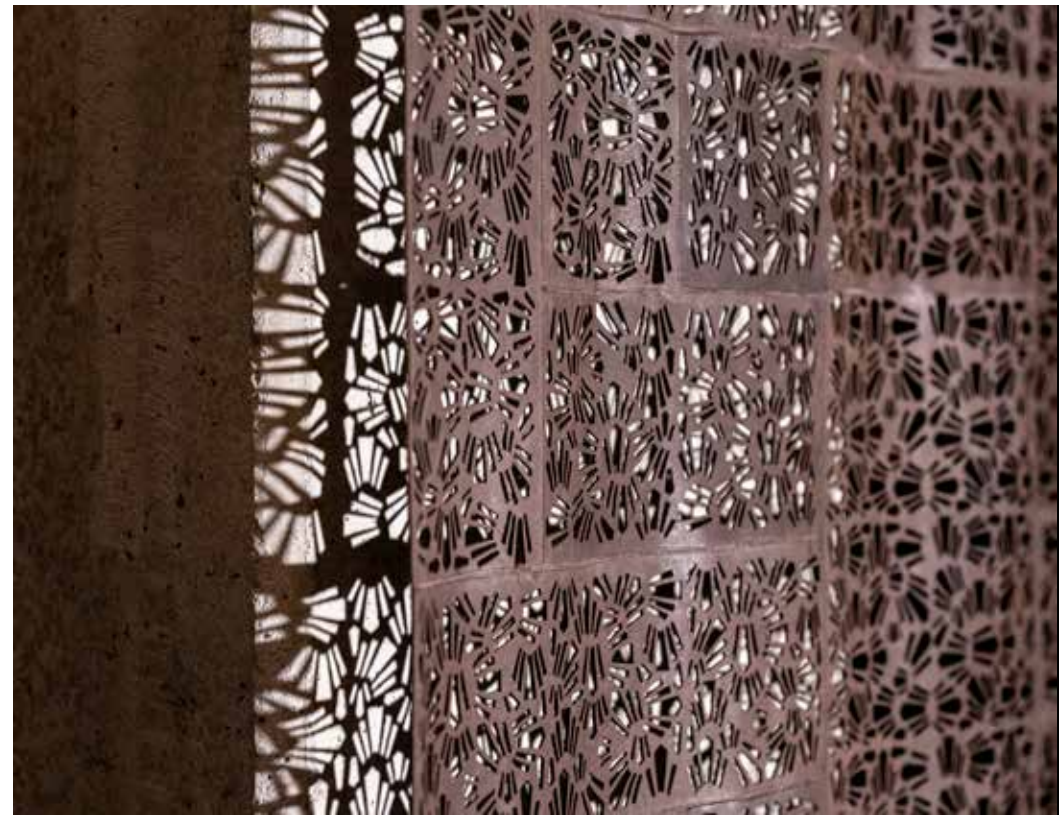

The Lasercut Panel Curtain creates an exciting interplay of light and shadow.

The large surface of the leather curtain ensures good sound absorption for improved room acoustics.

AVAILABLE IN DIFFERENT COLOURS AND LEATHER QUALITIES

01 LASERCUT PANEL CURTAIN MADE OF LEATHER

02 WALL-AND OBJECT- PANELLING

Our leather-covered panels are used for visual enhancement of larger wall or object surfaces.

In addition, depending on the material (acoustic felt or wood panels), sound-absorbing effects can also be achieved.

The magnetic fastening system enables flexible replacement of the leather tiles and acoustic panels. Alternatively, the elements can be fastened with screws or glue.

AVAILABLE AS LEATHER TILES OR
ACOUSTIC PANELS FOR SOUND ABSORPTION

03 LEATHER-PARAVENT

As a visual room divider, the screen combines the natural materials wood and leather. Its three interconnected panels can be decorated with individual leather elements according to personal preference.

In addition to its decorative effect, the paravent improves room acoustics as it absorbs sound waves.

PERFECT LEATHER QUALITY

We love leather and attach great importance to its quality! That's why winterior only uses leather of trustworthy origin.

The majority comes from an environmentally certified tannery in northern Germany we have been working with for many years. In order to produce as sustainable as possible, we favour vegetable-tanned leather.
